

QC Software, a Leader in WCS solutions, Includes Two Certified RFID Specialists

CINCINNATI, OH – January 11, 2010 - QC Software, a nationally recognized leader in warehousing software, is pleased to announce that two associates recently obtained their Comp TIA RFID certification.

John Smith and Troy Matteoli completed the comprehensive training program from the Computer Technology Industry Association. The exam measures the ability to install, maintain, repair and troubleshoot the hardware and software functionality of RFID products.

Both barcode and RFID are used to track items in the supply chain. While barcode technology has been the standard, RFID can increase transparency throughout the lifecycle of the product. Below is a brief comparison:

Parameter	Bar Code	RFID
Frequencies used for tag reading	Optical frequencies	Radio frequencies
Type of communication	Line of sight communication (each tag must be scanned)	Non-line of sight communication (multiple tags can be identified at the same time)
Data Volume	Limited data stored	Relatively large volume of data stored
Range of data readability	Very limited range, less than one to two feet	Can be read up to several feet
Cost	Less expensive	More expensive, but the cost will likely be reduced in the future

"We specialize in delivering innovative and practical solutions in the material handling industry. RFID is an emerging technology that will help our clients improve inventory tracking, reduce costs and errors, and minimize theft," states Jerry List, Vice President of QC Software. "This is just one of several solutions we offer to optimize warehousing operations."

QC Software is the leading provider of Tier 1 warehouse control systems to the warehousing and distribution industries. Since 1996, QC Software, utilizing state of the art technology combined with extensive research, development, and rigorous testing, has developed the QC Enterprise suite of products. Designed to be modular in nature, easily configurable, and platform independent, this highly scalable solution satisfies the needs of any size warehouse.

The Computer Technology Industry Association is a non-profit trade association providing vendor-neutral IT certifications in many countries throughout the world.
